ABSTRACT
This project is going to be an Employee Tracking website for various companies or offices for maintaining the records of their employee, allotting projects to them, editing and managing their profiles easily, giving them marks for his or her projects etc. Basically, the project contains an admin and user side, the admin side manages all the management like editing site contents, managing employees’ activities, projects, salary so on. The admin has a vital role in management of this system. If the admin has registered the employee, then only employee can login successfully else not. The registered employee by the admin can submit their assigned projects through the My Project section, can see the employee leader board, can see their own profile, can also write for a leave and complaint. This project makes a convenient way for employees and company admin to interact with one another.

Keywords: Tracking, Scrutinizing, Web Designing, Managing.

I. INTRODUCTION
An employee tracking system is a platform where all work-related as well as important personal details of an employee is stored and managed in a very secure way. It will be useful for various companies or offices for maintaining the records of their employee, allotting projects to them, editing and managing their profiles easily, giving them marks for his or her projects etc. This project helps various companies for maintaining the records, various activities of their employees in a systematic way and even employee can submit their projects, can view their projects status, profiles, can write a complaint and can also apply for leave easily which is a stimulating way of interaction.
between both. With the installation of such a tool, you can track and control all such activities that hamper your company's productivity. No matter what business your company runs, employee tracking applies in every relation. Especially companies that handle a large part of sensitive information are prone to get caught into such malicious activities.

VI. FUTURE SCOPE

• We want to make our system one stop platform for all the office related activities.

• In the future we want to add an attendance module; where employees can view and enter their attendance. Admin on the other hand will approve/ reject the attendance filled.

• A pictorial representation of the hierarchy in the organization will be provided where one employee can find details another employee such as name, email, work phone number etc.
