
DIGI LEGAL

Surabhi NG^{*1}, Dr. T. Vasudev^{*2}

^{*1}Student, Department Of Master Of Computer Application, Maharaja Institute Of Technology Mysore, Mysore, Karnataka, India.

^{*2}Professor, Maharaja Institute Of Technology Mysore, Mysore, Karnataka, India.

ABSTRACT

Digilegal include guiding clients, initiating communication, and setting up lawyers according to their areas of expertise. The automatic backups that will be preserved in case of any issues make this website secure enough to take payments on. We have made it easy for users to file complaints through our website or mobile app in order to protect users of all ages and skill levels.

I. INTRODUCTION

If you or someone you know has been injured by a criminal act such as robbery, hit-and-run, or any other crime, you may use this website to hire a lawyer and keep track of complaints you've filed against the wrongdoers. It's wonderful that there is a live person that you can contact for information on how to file a complaint and the filing cost.

II. METHODOLOGY

HTML: The Hypertext Markup Language (HTML) is the industry-standard computer language for defining the structure and content of web pages. HTML 5 is an updated version of HTML.

HTML5 was created to address compatibility problems with the existing HTML4 standard. Older versions of HTML need their own plugins and APIs, which is one of the greatest distinctions between HTML5 and earlier standards versions. (As a result, web pages developed and tested in one browser could not display properly in another.) A standardised interface is offered by HTML5 to make it easier to load elements. For instance, you don't need to install the Flash plugin when using HTML5, since the element operates on its own. Supporting multimedia on mobile devices is one of HTML5's design objectives. New syntactic capabilities including canvas, audio, and video tags have been developed to accommodate this. Additionally, HTML5 includes brand-new capabilities that let you alter how readers interact with your content.

CSS: The Cascading Style Sheets language has most recently evolved into CSS3, which is meant to expand CSS2. provides a variety of brand-new and enhanced features, like rounded corners, gradients, animations, transitions, and new layouts including grid, multi-column, and flexible box designs.

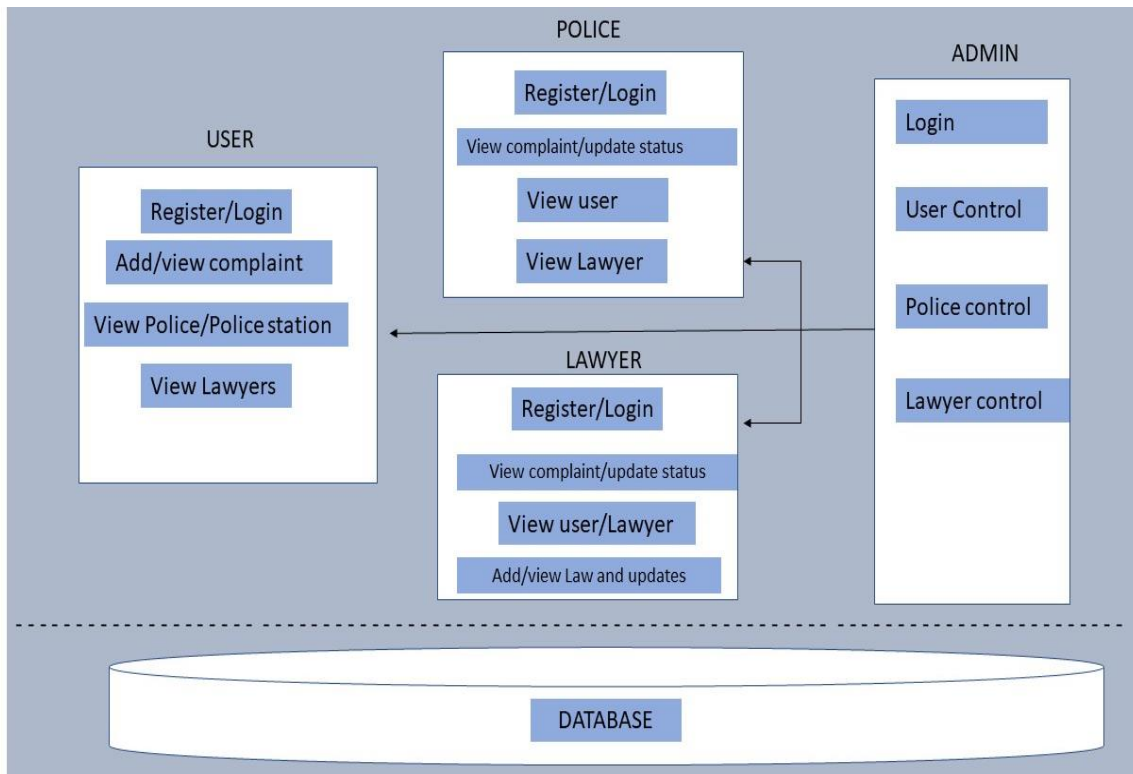

JavaScript: JavaScript (sometimes shortened as JS) is a first-class object-oriented, lightweight, and interpreted programming language that is most often used outside of the browser. But it is also put to use. It is a dynamic, multi-paradigm prototype-based scripting language that supports object-oriented, imperative, and functional programming paradigms.

It is used to plan or programmer how a web page will act in response to an event. JavaScript is a strong programming language that is simple to learn and often used to regulate how web pages behave.

Notepad: A text and code editor for Microsoft Windows is called Notepad. enables you to work with many open files in one window while supporting tabbed editing. The C suffix increment operator is where the product name originates.

Software called Notepad ++ is offered without charge. The project was once housed on SourceForge.net, where it received over 28 million downloads and twice took home the Source Forge Community Choice Award for Best Developer Tool. Tuxedo served as the project's host from 2010 until 2015. Notepad ++ has been housed on GitHub since 2015. The Scintilla editing component is used by Notepad ++.

System Architecture

III. RESULTS AND DISCUSSION

Test Cases

Condition to be Tested	Expected Result	Result
Clicking the submit without entering the details	Please fill all details	PASS
Result for lawyer registration	data should be supplied to database	PASS
Result for user lawyer discussion	data should be supplied to database	PASS
Result for case handling section	data should be supplied to database	PASS

IV. CONCLUSION

This project might be used for a variety of purposes, including selecting, contacting, and counselling local attorneys. It will have automated backups in case of crises and be secure enough to handle payments. This page contains all the information you may possibly need about a user.

New laws are required to defend fundamental rights in the digital age. Digital rights are strongly tied to the freedom of speech and the right to privacy and encompass the right to access, use, produce, and publish digital content. Computers and other technology equipment may also be used.
